FSA8108

Audio Jack Detection Solution Featuring Volume Up/Down & Send/End Detection

Features

- Detection:
 - Accessory Plug-In
 - Send / End Key Press
 - Volume Up/Down Key Press
- V_{DD} 2.7 to 4.5 V
- V_{IO} 1.6 V to V_{DD}
- THD (MIC) 0.01% Typical
- LDO Output for MIC Bias Voltage: 2.4 V
- ESD (IEC 61000-4-2) 15 kV Air Gap
- Detects 3- or 4-Pole Audio Accessories
- Removes Audio Jack Pop-and-Click Caused by MIC Bias

Description

The FSA8108 is an audio jack detection switch for 3- or 4-pole accessories that detects the audio plug connection. The FSA8108 detects volume up/down or send/end key presses. An LDO provides DC bias to microphone and remote key circuit in the accessory. For system flexibility, the FSA8108 features an I²C port with registers to allow programmability of AC timing specifications.

Applications

- Cellular Phones, Smart Phones
- MP3 and PMP (Portable Media Player)

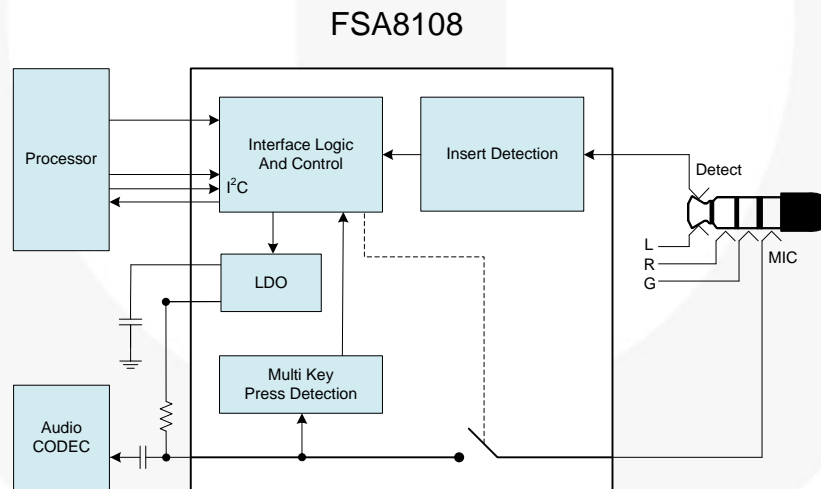

Figure 1. Typical Application Diagram

Ordering Information

Part Number	Operating Temperature Range	Top Mark	Package
FSA8108BUCX ⁽¹⁾	-40 to +85°C	G6	12-Ball, 3 x 4 Array, 0.4 mm Pitch, 250 µm Ball, Wafer-Level Chip-Scale Package

Note:

1. Includes backside lamination.

Figure 2. Typical Application Diagram

Notes:

2. A 1 kΩ resistor with a 2.2 µF capacitor is recommended for direct battery connection. This filter helps stabilize power rail events not associated with the FSA8039A. If power is supplied from a stable source, such as from a PMIC or LDO, a single 1 µF capacitor is recommended.
3. The J-DET is shorted to the left (L) audio channel when the headset or accessory plug is inserted into most audio jacks. Any external circuitry attached to the J-DET pin could affect audio performance in the 20-20 kHz range on the left channel.
4. The optional 10 kΩ resistor on the left channel is used to assist in detection of high-impedance accessories. This resistor has negligible impact on audio fidelity.

Pin Configuration

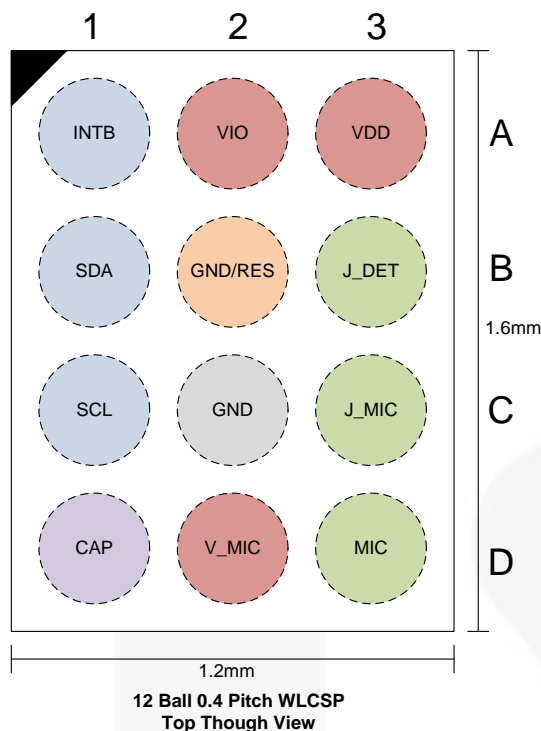

Figure 3. Pin Assignments

Pin Definitions

Name	PIN	Type	Description
INTB	A1	Output	Interrupt. Low is interrupt asserted.
SDA	B1	Data	I ² C data
SCL	C1	Data	I ² C input clock
CAP	D1	Output	Internal LDO output. A capacitor to ground is required.
VIO	A2	Power	Baseband I/O supply voltage
RES	B2	Input	Device reset control. Active high reset. Connect to GND if unused.
GND	C2	GND	Ground
V_MIC	D2	Power	LDO output to supply MIC bias voltage (2.4 V)
VDD	A3	Power	Core supply voltage
J_DET	B3	I/O	Input from a pin of the audio jack socket; plug insert/removal detection pin.
J_MIC	C3	I/O	Microphone switch path that connects to the audio jack.
MIC	D3	I/O	Microphone switch path that goes to the microphone input of the codec.

Application Information

Music Mode

When a 4-pole headset is inserted into the audio jack and a music/listening application is used, the MIC bias is normally enabled for headset button press detection (i.e. mute, volume change, etc.). This consumes power due to a constant path from the MIC bias resistor and microphone in the headset to GND. Fairchild has developed a Music Mode to enable the MIC switch periodically to monitor for a pressed button. This results in a power savings for battery-sensitive devices, such as cell phones or MP3 players. The FSA8108 enters Music Mode when the Music Mode Enable bit in CONTROL(0Ch) is set and a plug is inserted. Music Mode reduces MIC bias current by approximately 80% with the default Music Mode timing (09h) register value.

LDO Operation

$$R_{VOL\ UP\ KEY\ MIN} = \frac{1}{\left(\frac{V_{BIAS_MAX} - V_{TH_KEY_MIN}}{V_{TH_KEY_MIN}}\right) \frac{1}{R_{BIAS}} - \frac{1}{R_{MIC}}}$$

$$= 132\Omega$$

$$R_{VOL\ UP\ KEY\ MAX} = \frac{1}{\left(\frac{V_{BIAS_MIN} - V_{TH_KEY_MAX}}{V_{TH_KEY_MAX}}\right) \frac{1}{R_{BIAS}} - \frac{1}{R_{MIC}}}$$

$$= 286\Omega$$

Volume up Resistor
V_{BIAS}, LDO ±5%, 2.28V – 2.25V
R_{BIAS}=2.2kΩ
R_{MIC}=2kΩ
V_{TH_KEY_Min}:120mV default +12%, 0.134V
Max: 250mV default-7%, 0.233V

Figure 4. Example Key-Press Resistor Calculations and Values

The integrated microphone bias LDO is set to 2.4 V. The LDO can be used to bias a microphone accessory and is enabled / disabled by the I²C register bit LDO ENABLE in the CONTROL register(0Ch). This LDO requires a 0.22 μF decoupling capacitor on the output. The decoupling capacitor should be placed close to the LDO pin.

Headset Key-Press Operation

The headset key-press comparator threshold is a function of the MIC bias voltage, MIC bias resistor, and the MIC impedance. All of these variables must be considered when calculating the key-press resistor value. 0 is an example of how to calculate the key-press resistor value.

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter	Min.	Max.	Unit	
V_{DD}, V_{IO}	Supply Voltage from Battery	-0.5	6.0	V	
V_{SW}	Switch I/O Voltage	-0.5	$V_{CC}+0.5$	V	
I_{V_MIC}	V_MIC LDO Supply Current		15	mA	
I_{IK}	Input Clamp Diode Current	-50		mA	
I_{SW}	Switch I/O Current		50	mA	
T_{STG}	Storage Temperature Range	-65	+150	°C	
T_J	Maximum Junction Temperature		+150	°C	
T_L	Lead Temperature (Soldering, 10 Seconds)		+260	°C	
ESD	IEC 61000-4-2 System ESD	Air Gap		15	kV
		Contact		8	
	Human Body Model, JEDEC JESD22-A114	J_DET vs. GND, J_MIC vs. GND, VDD vs. GND, VIO vs. GND		11	
		All Pins		4	
	Charged Device Model, JEDEC JESD22-C101	All Pins		2	

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

Symbol	Parameter	Min.	Max.	Unit
V_{DD}	Supply Voltage	2.7	4.5	V
V_{IO}	I/O Supply Voltage	1.6	V_{DD}	V
T_A	Operating Temperature	-40	+85	°C
V_{IN}	MIC Switch Input Voltage Range	0	V_{DD}	V
V_{Audio}	Audio Voltage Range on J_DET Pin	-1	1	V
f_{Audio}	Audio Frequency on J_DET Pin	20	20000	Hz
J_DET_{RL}	Resistance on Audio Accessory Left Channel to generate Attach		500	k Ω

DC Electrical Characteristics

All typical values are at $T_A=25^\circ\text{C}$ unless otherwise specified.

Symbol	Parameter	V_{DD} (V)	Condition	$T_A=-40$ to $+85^\circ\text{C}$			Unit
				Min.	Typ.	Max.

t _{BUF}	BUS-Free Time between STOP and START Conditions	1.3		μs
t _{SP}	Pulse Width of Spikes that Must Be Suppressed by the Input Filter	0	50	ns

Notes:

- A Fast-Mode I²C-Bus® device can be used in a Standard-Mode I²C-Bus system; but the requirement t_{SU;DAT} ≥ 250 ns must be met. This is automatically the case if the device does not stretch the LOW period of the I2C_SCL signal. If the device does stretch the LOW period of the I2C_SCL signal, it must output the next data bit to the I2C_SDA line t_{r,max} + t_{SU;DAT} = 1000 + 250 = 1250 ns (according to the Standard-Mode I²C Bus specification) before the I2C_SCL line is released.
- C_b equals the total capacitance of one BUS line in pF. If mixed with high-speed devices, faster fall times are allowed according to the I²C specification.
